EXPERIENCE

EMPLOYMENT HISTORY

Web application developer

2021 - 2023

Hulys

I work at Hulys company. The company had various needs, and I joined as a Web Applications Developer. I started implementing its projects and collaborated with the team to build web applications, particularly for management purposes. The applications' role was to manage and generate detailed reports on the company's activities. Additionally, I worked on developing a customized application for the company's clients. The application relied on web technologies such as Laravel, Vue.js, Bootstrap, and MySQL. Furthermore, I was responsible for creating the company's official website.

Web developer

2022 - 2023

THIRDEYE

Remote work to fulfill the requirements of THIRDEYE company. I have worked remotely with the company's team and executed the development of some of their websites and web applications.

Front-end developer

2020 - 2021

ASMART 4Tech

I worked at ASMART 4Tech company, having joined at the beginning of 2020. My role involved the development and design of front-end interfaces to meet the company's projects and requirements. I worked for a year at the company, in addition to engaging in freelance work, including platforms like Mostaq and Freelancer. Later, I transitioned to another company.

Web designer and developer

2018- 2020

Freelancer

During this period, I began freelancing to meet the needs of various clients. Throughout this experience, I created numerous web pages and websites, with the majority of requests focusing on user interface design.

ACHIEVEMENTS AND TASKS

- Received 5 experience certificates from the companies I worked with during a work period that extends for more than 5 years.
- I have received ratings with an average of 4.8 out of 5 on freelance work platforms.
- I have built over 20 websites, and my personal website showcases a portfolio of various projects.
- I have worked on the development of more than 8 web applications.
- I have freelanced, executing projects for both companies and individuals.
- I keep up with the latest tech blogs for news and tips.
- I find solutions for seemingly challenging problems.
- I collaborate closely with developers and other professionals.
- I create integrated and user-friendly web applications.
- I interpret work requirements to formulate a programming vision that meets client needs.
- I thrive in high-pressure situations and tight deadlines.
- I organize and manage multiple priorities simultaneously.

PROJECTS

Domain and Web Hosting Service Provider

Languages and Technologies: Bootstrap, Laravel, jQuery, MySQL

A website that offers domain registration, hosting, VPS, and server services. I built the site from scratch to provide domain registration, hosting, and server solutions. It includes a control panel for customers to manage their servers and hosting.

Sales Management System

Languages and Technologies: JavaScript, jQuery, nw.js, PHP, MySQL

I built a system for a private enterprise to manage its sales. The system provides inventory and sales management, customer and supplier account management, detailed reporting, and incorporates an accounting foundation. It allows transactions in multiple currencies.

Currency Management System

Languages and Technologies: Bootstrap, JavaScript, jQuery, nw.js, PHP, MySQL

The Currency Management System is a web application designed to manage clients' funds and currency exchange operations. The system provides detailed reports and incorporates an accounting foundation to categorize the institution's profits and manage its clients' accounts. Additionally, the system offers SMS notifications and a dedicated application for clients to track and manage their account activities. This system has been specifically tailored for currency exchange establishments.

Power Station Management System

Languages and Technologies: Bootstrap, JavaScript, jQuery, nw.js, PHP, MySQL

The system provides the creation of invoices for power station customers and facilitates the collection of payments from them. Additionally, it includes tabs related to human resources management, such as company employees. The system has been implemented for multiple power stations.

Fuel Stations Management System

Languages and Technologies: Bootstrap, JavaScript, jQuery, nw.js, PHP, MySQL

A fuel station system was implemented for a gas station, meeting all the station's requirements. This includes managing fuel suppliers' accounts, handling customer accounts, and overseeing station staff.

CERTIFICATES

EXPERIENCE CERTIFICATES

- Certificate of Experience provided by Hulys.
- Remote Work Experience Certificate provided by THIRDEYE.
- Experience Certificate provided by ASmart 4Tech.
- Experience Certificate provided by the PINKCODE team.
- Experience Certificate provided by DEKATREIS company.
